Backend engineer experienced in building and debugging real-world production systems involving microservices, high-throughput APIs, and cloud-integrated applications. Worked on systems handling large-scale traffic and complex device-cloud interactions, with a strong focus on reliability, performance, and practical problem-solving

EDUCATION

Masai School

Full Stack Developer

Bangalore

JAN 2022 – OCT 2022

BIT Sindri

BTech (Mech. Engg)

Dhanbad

AUG 2015 – MAY 2019

EXPERIENCE

Mersive

Senior Software Developer

JULY 2025 – PRESENT

Denver USA

- Worked on a cloud-connected device platform where issues often spanned across backend APIs, frontend apps, and physical devices. Regularly debugged production issues end-to-end, identifying root causes across multiple layers instead of isolated fixes, which improved overall system reliability.
- Integrated Google Calendar into the product to enable users to schedule and sync meetings directly with devices. Focused on handling authentication, API edge cases, and secure data flow to ensure stable calendar syncing for enterprise users.

Quintype Technologies

Software Engineer

NOV 2022 – JULY 2025

Bangalore

- Built and maintained backend microservices for a CMS platform used by large publishers. These services handled ~100k CMS requests and were part of a system serving ~1B API gateway requests, requiring careful attention to performance and stability.
- Developed features like story cloning and automated translation to reduce repetitive manual work for editorial teams. This directly improved content publishing speed and operational efficiency.
- Worked on Elasticsearch-based search systems where performance was critical due to high content volume. Optimized queries using filters and better query structure, improving response times and making content retrieval more efficient.
- Built an internal billing system that processed large-scale usage data from AWS Athena and generated accurate daily and monthly billing reports. This replaced manual processes and ensured consistent, reliable billing for clients.
- Designed PostgreSQL schemas and wrote migration scripts with a strong focus on data safety. Ensured zero data loss during schema changes in production environments.
- Implemented a bandwidth anomaly detection system that monitored usage patterns and triggered automated Slack alerts and client notifications. This helped teams quickly identify unusual spikes and take action proactively.

TECHNICAL SKILLS

Languages: Javascript, Typescript, Clojure

Backend & APIs: Node.js, Express.js, Fastify, REST APIs, Microservices

Databases & Search: PostgreSQL, MongoDB, Elasticsearch

Cloud & Tools: AWS (Lambda, S3), Firebase, CircleCI

CERTIFICATIONS

Machine Learning — Coursera, Sep 2020

Deep Learning — Coursera, March 2021
