Summary

Backend Software Engineer with 3+ years of experience building scalable backend systems, microservices, and cloud-integrated applications. Proficient in Node.js, TypeScript, PostgreSQL, and AWS, with hands-on experience debugging production systems, designing REST APIs, and developing reliable, high-performance software. Passionate about backend architecture, system design, and solving complex engineering problems.

Experience

- Senior Software Developer, Mersive** Jul 2025 – Mar 2026 | Denver USA
 - Debugged production issues across backend APIs, React applications, Firebase services, and cloud-connected devices, improving overall platform reliability
 - Integrated Google Calendar with enterprise meeting devices using secure OAuth authentication and Calendar APIs, enabling seamless meeting scheduling and synchronization
- Software Engineer, Quintype Technologies** Nov 2022 – Jul 2025 | Bangalore
 - Built and maintained backend microservices for a large-scale CMS platform serving ~100K CMS requests and supporting API Gateway traffic exceeding 1B requests.
 - Developed features including Story Cloning, Automated Translation, and Elasticsearch search optimization, improving editorial productivity and search performance.
 - Designed PostgreSQL schemas, implemented safe database migrations, and developed AWS Athena-based billing pipelines with automated anomaly detection and Slack alerts.

Education

- Full Stack Development, Masai School** Jan 2022 – Oct 2022 | Bangalore
- B.Tech in Mechanical Engineering, BIT Sindri** Aug 2015 – May 2019 | Dhanbad

Technical Skills

Languages Javascript, Typescript, Clojure	Backend Node.js, Express.js, Fastify
Frontend React, Redux Toolkit, Context API	Databases PostgreSQL, MongoDB, Elasticsearch
Cloud & DevOps AWS (Lambda, S3), Firebase, Supabase, CircleCI, Git, GitHub	Concepts REST APIs, Microservices, System Design, OOP, SOLID Principles

Projects

- Clinic Management System, A modern patient and appointment management platform.** May 2026 – Jul 2026
Tech Stack: Node.js • Express • TypeScript • PostgreSQL • Supabase • React • Vite
 - Built a full-stack clinic management system enabling patient registration, appointment scheduling, and medical history management with secure authentication.
 - Designed a scalable backend using layered architecture with TypeScript and PostgreSQL to improve maintainability and extensibility
 - Implemented image uploads, JWT/Supabase authentication, and REST APIs. Deployed the application on Render and Netlify. [[Demo Link](#)] [[Github](#)]
- Taskly – Todo Management System, A productivity-focused task management application.** Sep 2024 – Dec 2024
Tech Stack: Node.js • Express • TypeScript • React • MongoDB
 - Developed a full-stack task management application supporting task creation, updates, completion tracking, and deletion through RESTful APIs.
 - Designed the backend using Layered Architecture (Controller → Service → Repository), making the application database-agnostic and following SOLID principles for clean, maintainable code.
 - Implemented input validation, centralized error handling, and modular project structure to improve code quality and simplify future feature development. [[Demo](#)] [[Github](#)]

Certifications

JavaScript — Issuer: Hackerrank | Date: July 2026, **Deep Learning Specialization** — Issuer: Coursera | Date: March 2021, **Machine Learning** — Issuer: Coursera | Date: Sep 2020
